## Form checkbox value vba

A check box is a field that you can select to store data. To create a check box in Excel VBA, follow these steps. 1. On the Developer tab, click Insert. 2. Under ActiveX Controls, click Check Box. 3. Drag a check box on the worksheet. 4. Right-click the check box (make sure Design mode is selected). 5. Click View Code. Note: You can change the label and name of the control by right-clicking the control (make sure Design mode is selected), and then clicking Properties. Change the check box label to MyCheckBox. Now, leave CheckBox1 as the name of the checkbox. 6. Add the following lines of code: If CheckBox1.Value = True Then Range(D2).Value = 1 If check box1.Value = False, then range(D2).Value = 0 7. On the page, select the check box (make sure Design mode is not selected). Result Although it may be useful to place a check box directly on a worksheet in some cases, this check box is especially useful when you place it on a Userform form. The Check box is one of the UserForm controls. In the User Form, you can select and drag the check box. CheckBox Control is used to specify or indicate binary choices. This either turns the value on or off. If you use multiple check boxes, you can select multiple check boxes in the UserForm form at the same time. You can select multiple check boxes in the group square. For more details about CheckBox Control, see the next chapter. Check boxes are one of the easiest ways to interact with users. Controlling them with VBA makes them more flexible and useful in Excel applications. Here is a collection of the most common snippets and settings. Create variable Dim chkBox As CheckBox 'Create checkbox Set chkBox = ActiveSheet.CheckBoxes.Add(Top:=0, Height:=1, Width:=1, Left:=0) Finish SubLoop through all check boxes If you want to apply the same settings or values to all check boxes on the worksheet, this can be achieved by repeating between check boxes and applying the settings individually. Sub LoopThroughCheckboxes() Create variable Dim chkBox As CheckBox 'Loop all checkboxes on the active tab All chkBox In ActiveSheet.CheckBoxes 'Don't do anything with all checkboxes using chkBox.' Next chkBox SubSet check box to a variableThe following macro sets the check box to a variable. Sub SetCheckboxToVariable() 'Create variable Dim chkBox As CheckBox ' Set the variable to a specific checkbox Set chkBox = ActiveSheet.CheckBoxes(CheckBoxName) End SubGenerate accurate VBA code in seconds with AutoMacroAutoMacro is a powerful VBA code that comes loaded with an extensive code library and many other time-saving tools and utilities. Whether you're an experienced encoder looking to save time or a newbie just trying to get things automacro on the device you.Common checkbox settings Most likely you need to change include the macro below. Sub CommonCheckboxSens() CommonCheckbox Settings() Dim chkBox As CheckBox 'Set the variable to a specific checkbox Set chkBox = ActiveSheet.CheckBoxes(CheckBoxName) 'Set variable to Call Checkbox macro name Set chkBox = ActiveSheet.CheckBoxes(Application.Caller) 'Set the check box chkBox.Name = CheckBoxName 'Set the check box (3 possible values) chkBox.value = xl Off chkBox.value = xl On chkBox.value = xlMixed 'Set the linked cell chkBox.LinkedCell = \$E\$5 'Reset the linked cell to no chkBox.LinkedCell = Set the position of the chkBox . Top = 20 . Left = 20 . Height = 20 . Width = 20 Over Change check box chkBox.Caption = check box Displays the name of the check box page. which contains the MsgBox chkBox.Parent.Name Show cell title with top left pixel in check box MsgBox chkBox.TopLeftCell.Address 'Show cell with top left pixel', MsgBox chkBox.TopLeftCell.Address 'Show cell title of cell in bottom right pixel check box MsgBox chkBox.BottomRightCell Set macro to be called , click the check box chkBox.OnAction = NameOfMacro Remove the macro is called chkBox.OnAction = Is the check box enabled? True or false chkBox.Enabled = False chkBox.Enabled = True 'Set the check box so that you do not move cells chkBox.Placement = xlFreeFloating 'Set the check box to move with chkBox cells. Delete End SubDelete all checkboxes on the active sheetSub DeleteAllCheckBoxes() ActiveSheet.CheckBoxes.Delete End SubDon't forget:If you've found this post useful , or if you have a better approach, please leave a comment below. Need help adjusting this to your needs? I'm guessing the examples of this post don't exactly fit the situation. We all use Excel differently, so it is impossible to write an entry that meets everyone's needs. By taking the time to understand the techniques and principles of this post (and elsewhere on this site), you should be able to adapt to your needs. But if you're still struggling, then: Read other blogs or watch YouTube videos on the same topic. You can benefit a lot more by exploring your own solutions. Ask the Excel Ninja in the office. It's amazing what other people know. Ask a question in a forum like Mr Excel or the Microsoft Answers Community. Remember, people on these forums usually give their time for free. So take care to craft the issue, make sure it is clear and concise. List all the things you've tried and provide screenshots, code segments, and Use Excel Rescue, who are my consulting partner. They help by providing solutions to minor Excel problems. What's next? Don't go yet, there's plenty more to learn in Excel Off The Grid. Check out the latest posts: I created a one which contains two check boxes. I would like to be able to do different things depending on whether each box is checked or unchecked. However, it seems like no matter what I do, it will always tell me the original value of the checker (false and false). Here is the code attached by clicking commandbutton1: Private Sub CommandButton1\_Click() ReadData End Sub And here ReadData: Sub ReadData() Dim myForm As UserForm Set myForm = UserForms.Add(ComplaintEntryForm) Debug.Print (myForm!CheckBox1.Name) Debug.Print (myForm!CheckBox1.Value) Debug.Print (myForm!CheckBox2.Name) Debug.Print (myForm!CheckBox2.Value) Sub end It does not matter whether the boxes are checked, the direct window always shows VBA. userforms.add(ComplaintEntryForm). Show CheckBox1 False CheckBox2 Fake I have a screenshot of the whole operation, but it will not let me upload because I am a new user. You can use macros to add check boxes to a worksheet, attach check boxes to cells, select or clear all check boxes, and assign macros to check boxes. Thanks Dave Peterson for his contribution to this site. Add check boxes The following code adds a form check box to each cell in the specified range. The check box is placed in the upper-left corner of the cell and the label is labeled Active. The check box is attached to the cell in which it is placed. To link to another cell, change the numbers in the Offset property. The first number is rows - positive number is down and negative is up. The second number is the columns - using a positive number to the right, as a negative to the left. For example, you can use this option to connect to a cell on the left two columns to the left. LinkedCell = c.Offset(0, -2) . The OnAction line that set the macro to run commented on the comment. To enable it, remove the apostrophes and change the word mycbxMacro to a valid macro name in the workbook. Sub AddCheckBoxesRange() Dave Peterson 'add Form check boxes Dim c As Range Dim myCBX As CheckBox Dim wks As Worksheet Dim rngCB As Range Dim strCap As String Set wks = ActiveSheet Set rngCB = wks.Range(B2:E6) 'Set rngCB = Selection strCap = Active For all c in rngCB c Set myCBX = wks.CheckBoxes.Add \_ (Above:=. Top, Width:=. Width, \_ Height:=. Height, Left:=. Left) End of myCBX. Name = cbx\_ & c.Address(0, 0) . LinkedCell = c.Offset(0, 0) . Address(external:=True) . Caption = strCap' . OnAction = ThisWorkbook.Name \_ . & mycbxMacro Finish next c End of Sub Delete All Check boxes The following code removes all Forms from the active worksheet Ra DeleteAllCheckboxes() ActiveSheet.CheckBoxes.Delete Sub Check-es boxes: The following code selects all Form check boxes in active worksheet Sub MarkCheckBoxes() Dim chk As CheckBox Dim ws Mint worksheet set Ws = ActiveSheet for all chks in ws. Check boxes Value = True Delete Next chk Sub from all check boxes The following code removes the check mark from all forms form fields on the active worksheet On Sub ClearCheckBoxes() Dim chk As CheckBox Dim Ws As worksheet set Ws = ActiveSheet all chk A ws. Check boxes chk. Value = False Next chk Sub Toggle check boxes The following code changes the setting of all Form check boxes on the active worksheet - if the check box is selected, the check box is selected and the unchecked check boxes are selected. Sub ToggleCheckBoxes() 'xlOn= 1 and xlOff= -4146 Dim chk Mint check box for all activesheet chks. CheckBoxes chk. Value = xlOn + xlOff - chk. Value: Next chk Sub Link check box cell: The following code links each Form check box on the active worksheet to the cell with the upper-left corner of Sub LinkCheckBoxes() Sub LinkCheckBoxes() Dim chk As CheckBox Dim Ws As Worksheet Set Ws = ActiveSheet for all chks in ws. Check boxes for chk . LinkedCell = \_ . TopLeftCell.Address End With Next chk End Sub If you want to reference another cell, use the Offset property. The first number is rows - positive number is down and negative is up. The second number is the columns - using a positive number to the right, as a negative to the left. For example, you can use this option to connect to a cell on the left two columns to the left. Sub LinkCheckBoxesOffset() Dim chk As CheckBox Dim Ws As Worksheet Set Ws = ActiveSheet for each chk In ws. Check boxes for chk . LinkedCell = \_ . TopLeftCell.Offset(0, -2). Address end of the next chk Sub Assign Macro to Check Boxes The following code macro is assigned to active worksheet Sub SetCheckBoxesMacro() Dim chk As CheckBox Dim Ws As Worksheet Set Ws = ActiveSheet all chk for all squares in ws. Check boxes chk. OnAction = CheckBoxDate Next chk End Sub Download the sample file You can download the sample file to use the check box code. The compressed file is in xlsx format and contains macros.
